Are you ever going to release the mod_kapow apache source code?

Hello, I am curious about the module described in

mod kaPoW: Protecting the Web with Transparent Proof-of-Work

http://www.thefengs.com/wuchang/work/puzzles/globalinternet08_kapow.pdf

in GlobalInternet 2008

I know there has been some python/php code similar to this work at metacaptcha.com,

however, I was wondering if you have any plans to release the code for the apache module described in that
paper...it seems very useful!

Is it possible to offer a ransom for its release?

Thank you!   That is awesome!

In your original paper, you mentioned you intended on licensing it under the GNU GPLv3.   If I clean it up for
distribution and packaging may I modify/distribute it under those terms? (with full attribution, of course)

May I make modifications?

I don't see any "LICENSING" file in this distribution.

Sure. I thought we had GPL headers on there already, but a GPLv3 is fine.   You are welcome to modify it under that license.

Cheers,
Wu
